

518 Dive SAR Harness

The DIVE-SAR is LSC's finest professional grade helicopter hoist capable Rescue Diver's Harness. It is the first helicopter hoist capable Rescue Diver's Harness designed to interface with the Rescue Diver's existing dive gear and combine the security of a full body harness and the comfort of a seat harness.

The newly designed full body harness is constructed primarily of MIL-SPEC Types 8 and 13 nylon webbing and features LSC's exclusive low profile, quick adjusting stainless steel hardware. When hoisted, the upright, slightly reclined seated position allows total use of the rescuer's hands even when in full gear.

Ideally suited for rapid deployment type missions in swift/cold water or open water rescues. The DIVE-SAR incorporates LSC's newest techniques in weight distribution for superior comfort due to our unique design and full support offered by 3" wide chest, waist and leg straps versus the more common heavy, bulky pads. Available in Regular and XX-Large.

SPECIAL ORDER ITEM ONLY - ORDERS OF A MINIMUM OF 25 PER SIZE.

Specifications:

#518 Dive SAR Harness

Weight	3.76lbs (1.7kg)
